

**TechTotal's
Technical
Writing Course**

Course Description

This is a class designed for technical writers who must create and edit graphics as a part of their documentation work. It focuses on identifying graphics file types, manipulating images, choosing image types, using screen captures, working with data displays, and applying good graphic design principles.

Course Syllabus

1. Technical Writing

Technical Writing is a unique and diverse field, which integrates itself in the field of all latest technologies on the face of the Earth. It is a creative and artistic field where one can expertise himself in all the cutting edge technologies and thus, having an edge over other professional career options. It has made his mark in all the fields' computer hardware and software, aerospace industry, robotics, finance, consumer electronics, and biotechnology. It communicates technical (specialized) information, generally in the form of user manuals, training materials, information guides and many. These may be printed or portable documentation such as PDF or online help. In today's customer-centric business model, an organization's user manuals and technical write-ups act as its public face and also reflect its level of professionalism.

2. Why Technical Writing

Technical communicators work in a challenging, exciting field that tests their ability to adapt to new situations and learn new skills. People who enjoy learning new things will find technical communication a stimulating career.

A career in technical communication also allows you to pick up skills in programming and Web designing that will broaden your knowledge while making you a more valuable employee and a more marketable job seeker

3. Role of a Technical Writer

A Technical writer is a professional writer who designs, creates, maintains, and updates technical documentation—including online help, user guides, white papers, design specifications, and other documents. Engineers, scientists, and other professionals may also produce technical writing, often handling their work to a professional technical writer for

editing and formatting.

A technical writer is one who communicates information about a technical subject, pointed at a specific audience for a specific purpose. The challenge for a good technical writer is to convey the information clearly, briefly and in language that is understandable yet is suited to the requirements of the audience
